AI & AGENTS

- LLM agents & agentic workflows
- MCP & tool connectors
- Claude Code / agent tooling
- Prompt & context engineering
- AI-assisted automation
- AI demos & POCs

DATA & SYSTEMS

- ML use cases & model evaluation
- SQL / databases
- ERP integration
- CRM integration
- APIs & data flows
- PIM / product data
- e-Invoicing / Peppol

SOFTWARE & CPQ

- Configure-Price-Quote (CPQ)
- 3D / parametric configuration
- Rule-driven modeling
- Prototyping
- Jira · Axure · Adobe

SALES & DELIVERY

- Full sales cycle
- C-level discovery & closing
- Client relationship management
- Solution demos
- Business cases & project delivery
- Public speaking & events

LANGUAGES

Spanish	C2 native
French	C1
English	C1
Dutch	B2 (improving)
Catalan	A2

EDUCATION

MSc European & International Studies
CY Paris Cergy, 2019–2021
BA Advertising & Communication
Univ. de Valladolid, 2015–2019
IT Applied Computer Science — Karel
de Grote, Antwerp (not completed)

PROFILE

Technical-commercial hybrid who **builds and sells**. My core strength is **communication across the three sides of a project**: with the **client** in discovery and commercial talks, with **project management** on scope, priorities and delivery, and with the **development team** on what's technically feasible. Familiar with **AI agent tooling** and the building blocks of agentic workflows, I can scope a solution, prototype it, build the business case, and keep everyone aligned from first call to delivered value.

EXPERIENCE

Account Executive & Product Owner — **Nestoya** (CPQ and digital- twin software, modeled to client needs) Apr 2022 – present · Antwerp

- Ran the full technical sales cycle (discovery, solution design, demo/POC, C-level close, expansion) for a rule-driven CPQ software modeled to client needs. **Closed +€600K**.
- Product ownership of delivery**: turned customer requirements into specs and business cases and drove them to working solutions, bridging sales, product and engineering teams to keep everyone on the same page.
- Owned client relationships and stakeholder alignment**: balanced what a client wanted commercially with what engineering could realistically ship, resolving scope conflicts and turning the signed contract into a working solution.
- Built **AI agent workflows and automation as internal tooling for the organisation**, working hands-on with the building blocks of agentic flows (tools, skills, evals) to speed up demos, requirement analysis and internal ops.
- Created technical demos and 3D-configurator POCs that drove technical buy-in.

Earlier — Project & Communications roles

2021

- Event manager and speaker, "Heritage Night" — UNESCO World Heritage Cities of Spain (2021): organised the programme and presented it to large public audiences. I enjoy representing and speaking in front of a room, now applied to demos, workshops and client events.

SELECTED TECHNICAL BUILDS

- Agentic sales-ops system** — an LLM orchestrator that runs a real B2B pipeline through governed connectors into Jira and Microsoft 365, with permission-scoped guardrails and an audit log built into the architecture.
- Scope-aware client delivery platform** — a Next.js / TypeScript app with an ML classifier that grades client requests against the signed contract, validated with an offline back-test (confusion matrix, false-bill rate) before going live, with a human in control of every commercial decision.
- 3D product configurators & quoting demos** — interactive CPQ prototypes for engineering and manufacturing use cases.

WHAT I BRING

- Genuinely **build and prototype with AI agents**, and adapt how I explain them to each audience, matching the client's business context and level of technical understanding.
- Translate client needs into **actionable goals, business cases and a delivery roadmap** for technical and data teams.
- Can run **customer pilots, workshops and technical demos** and oversee delivery to realized value.
- Multilingual Benelux + Southern-Europe coverage (NL, FR, EN, ES).
- Building a public portfolio of working AI/agent projects.
